Bharat - RAG Test Document

About Bharat

Bharat is learning Python, FastAPI, LangChain, RAG, and modern AI engineering. He is building practical AI projects to understand how real-world AI applications work.

Python

Python is a high-level programming language known for its readable syntax. It is widely used for backend development, automation, data science, machine learning, and artificial intelligence.

FastAPI

FastAPI is a Python web framework used to build APIs. It supports automatic API documentation and is commonly used for modern backend services and AI application backends.

RAG

RAG stands for Retrieval-Augmented Generation. A RAG system retrieves relevant information from an external knowledge source and provides that information to a language model as context before generating an answer.

Goal of the Project

The goal of this project is to build a question-answering system that can read this document and answer questions using information retrieved from the document.
